News Page Functionality Help

Linking directly to a div on the page:

1. Give your div any id name you want

   Example: `<div id="books">`

2. In your anchor tag, make your href point to that id. Use # with the id name.

   Example: `<a href="#books">`

Fixed positioning

1. Give your div an id and select it in css.

   Example:
   HTML
   `<div id="books">`

   CSS
   ```
   #books {

   }
   ```

2. In CSS, set the `position` property to `fixed`.

   ```
   #books {
        position: fixed;
   }
   ```

3. In CSS, adjust the location of the div by using offset. The way offset works is you give it a value of how far you want it from the top, right, bottom, or left. For example:

   ```
   #books {
        position: fixed;
        bottom: 100px;
        left: 0px;
   }
   ```

   The div will be fixed to the left side of the screen, 100 pixels from the bottom.
